

STYLE GUIDE

Phase 1: planning and visual direction. Everything here is a proposal for your review. Nothing in this guide is a print-ready file, and the production values that depend on the printer (spine, board, cloth, foil, final margins) are marked provisional.

1 · PRINCIPLES

- An atlas first, a coloring book second.** The page should look finished before a single pencil touches it: generous white space, classical type, one consistent line.
- Built for coloring.** Every drawing is closed line art with no shading or grey, areas large enough for a colored pencil, and controlled detail. The interior prints in one color, black, on cream uncoated paper; all color comes from the reader.
- One system, 195 times.** Every country page uses the same frames in the same places. Variation comes only from the content: flag proportions, map shapes, the length of a name or a caption. The six sample pages were chosen to stress-test exactly that.
- Facts that hold.** One reference year (2025), one source per field for all 195 countries, United Nations treatment of borders, and short factual notes where a dispute affects a figure.

2 · WHAT THIS GUIDE COVERS

SECTION	STATUS
3 Typography and licenses	Proposed
4 Page grid and margins	Proposed; margins provisional until the printer's blank dummy
5 Line weights	Proposed; to confirm on the press proof on the actual stock
6 Flags and the color dots	Proposal requiring your decision (black-only interior)
7 Maps	Proposed
8 Illustrations and captions	Proposed
9 The five facts and the name line	Applies settled decisions; formats proposed
10 Palette and cover direction	Direction only, not a production cover

3 · TYPOGRAPHY

Two classical families, both under the SIL Open Font License 1.1: free for commercial print, embedding permitted, no per-copy fee. The license files travel with the source package and the fonts install directly in InDesign.

FAMILY	USE	LICENSE
Cormorant Garamond (Christian Thalmann)	Display: country names, section titles, cover	SIL OFL 1.1
EB Garamond (Georg Duffner, Octavio Pardo)	Text, facts, labels, captions, register	SIL OFL 1.1
Noto Serif JP / CJK, Noto Naskh Arabic and other Noto Serif scripts	Country names in their own script	SIL OFL 1.1

HIERARCHY (COUNTRY PAGE)

Country name
Cormorant Garamond SemiBold, 46 pt,
caps, +20 tracking

ITALY

Name in own language
EB Garamond Italic 17 pt; scripts 17–
19 pt; transliteration italic 13 pt

Italia 日本 *Nippon*

Labels
EB Garamond Medium 7 pt, caps, +160
tracking

COLOR THE FLAG · CAPITAL · MY VISIT

Fact values
EB Garamond 10 pt (9 pt when longer
than 26 characters)

302,068 km² (116,629 sq mi)

Caption
EB Garamond Italic 9 pt, centered, one
sentence per line

The Statue of Liberty, New York Harbor.
The bald eagle is the national bird.

Notes
EB Garamond Italic 7 pt, asterisk

* *Alaska and Hawaii are shown at different scales.*

Color register
EB Garamond 8.5/10.4 pt, colors in
small caps

JAPAN A WHITE flag with one RED circle in the exact middle.

Minimum size anywhere in the interior: 7 pt, except the 5.6 pt color names under the flag dots (all caps, tracked). These are the first thing to check on the press proof.

4 · PAGE GRID AND MARGINS

A4 portrait, 210 × 297 mm, one country per page. Two columns inside a live area of 176 × 267 mm: a 72 mm column for the flag and the facts, an 8 mm gutter, and a 96 mm column for the map and the illustration. The journal band (photo and *My Visit*) closes every page at the same height.

MARGIN	VALUE	
Inner (binding side)	20 mm	provisional
Outer	14 mm	provisional
Top / bottom	14 / 16 mm	provisional
Bleed	3 mm	nothing bleeds on country pages

The frames stay in the same position on left- and right-hand pages; only the margins swap, so the binding side always has the wider margin. A thread-sewn case binding opens well but not perfectly flat: we expect roughly 4 mm lost on each side of the fold, and the inner margin keeps every element clear of that. The real figure comes from the printer's blank dummy in the final materials; until then these margins are a working assumption, not a production setting.

See the facing-page preview supplied with the samples.

5 · LINE WEIGHTS

Plate frame, My Visit outer frame	
Hairlines, fact rules, inner frames	
Flag outer edge (0.30 mm)	
Flag inner lines (0.17 mm)	
Map coastline and border (0.30 mm)	
Illustration line (≈ 0.25–0.35 mm at size)	

Rule of thumb for colorable art: no enclosed area smaller than about 2 mm across unless it is meant to stay white (the stars on the US and Brazilian flags). Lines under 0.15 mm are avoided because they break up on uncoated stock.

Frame positions in millimetres, measured from the top-left of the live area. They map 1:1 onto InDesign frames.

6 · FLAGS

Every flag is drawn from its official construction at its official proportions (2:3 for Italy, 10:19 for the United States, 1:2 for Australia, 7:10 for Brazil), fitted inside a 72 × 48 mm box from the top left. Outlines are vector, derived from the construction drawings and checked against the official specification; for Australia, all six star positions were checked against the Flags Act 1953. Very small details (Brazil's 27 stars, the Egyptian eagle) are kept at the official size rather than enlarged.

THE COLOR DOTS: AN ISSUE TO DECIDE

YOUR DECISION

The Decisions Log settles colored dots beneath each flag, in the flag's reading order. But the interior is specified in one color, black. Printed in black only, a dot cannot show its color. Three ways to keep the idea without adding color pages or changing the print budget:

A · Outline dots with color names (recommended)  GREEN WHITE RED The reader colors the dots first and uses them as a key. Works in black, stays an instruction. Used on the six samples.	B · Names only GREEN · WHITE · RED Cleanest and shortest, but loses the visual "palette" moment the dots were chosen for.	C · Printed color dots  GREEN WHITE RED Needs four-color printing on every country page: a different, more expensive book. Not in the RFQ v2 specification.
--	---	---

Reading order (proposed, applied on the samples): the field and the stripes first, as you read them, left to right and top to bottom; then the emblem. Italy: green, white, red. Egypt: red, white, black, then gold for the eagle. Under the dots, one line points to the Color Register, where the arrangement is explained in words.

7 · MAPS

Source: Natural Earth 1:10m (public domain), drawn as vector outlines in an equal-area projection centered on each country, inside a 96 × 80 mm frame. Coastlines are generalized for the page (detail under about 0.1 mm is removed; islands under about 0.35 mm² at print size are dropped, with a note when this matters). Capitals are marked with a ringed dot and set in italics. Distant parts get labeled inset boxes at their own scale, with a note (Alaska and Hawaii; the Ryukyu Islands).

Borders. Natural Earth draws de facto lines. Where these differ from United Nations treatment, or where a dispute affects the area figure, the page carries a short factual note (Japan: southern Kuril Islands; Egypt: Halaib Triangle). Before print, each map is checked against the UN Geospatial Information Section maps.

8 · ILLUSTRATIONS AND CAPTIONS

Every illustration sits in the same double-ruled plate, 96 × 72 mm, like an engraved plate in an old atlas. The frame gives every subject the same weight on the page, whatever its shape, and keeps the composition tidy where a scene runs to the edge.

Subject rule (settled): a landmark of international standing where one exists; otherwise the officially designated national animal. Nothing is invented to fill space. Where a country has an officially designated animal and the landmark is drawn, the caption names the animal in a second short sentence.

Caption: one or two short sentences, one per line, 9 pt italic, centered. On the samples the longest is Brazil's (two lines); that is the maximum we recommend.

How the samples were made: AI-assisted line art for the subject only (never for maps, borders or flags), generated against a single style reference so all six share one line weight, then cleaned up and converted to true vector paths. AI drawings still contain architectural simplifications, and in production each one gets an illustrator's correction pass against photo references. The raster originals are kept for reference; the pages use the vector files.

Rights: landmarks under active image rights are avoided or cleared. Christ the Redeemer, shown in the original reference images, is licensed by the Archdiocese of Rio de Janeiro for commercial products; the Brazil sample therefore uses Sugarloaf Mountain until you decide whether to seek a license.

9 · THE FIVE FACTS AND THE NAME LINE

FIELD	FORMAT	SOURCE (PROPOSED, SAME FOR ALL 195)
Capital	English exonym; note where the seat of government differs	Constitutions / official sources
Population	One decimal, in millions ("59.1 million"); thousands below one million	UN World Population Prospects 2024, 1 July 2025
Language	Main or official language(s), at most two	Constitutions / official sources
Area	Whole km ² , square miles in parentheses	National mapping or statistics agency, edition valid in 2025
Currency	Name in American English, ISO code in parentheses	ISO 4217

Name line. The country's name in its own language and script, with a transliteration in italics for non-Latin scripts (日本 *Nippon*, مصر *Misr*). Where the own-language name is the English name (United States, Australia), we propose showing the formal name instead (*United States of America*, *Commonwealth of Australia*) so the line is never empty and never repeats the title. YOUR DECISION

The 2025 reference year appears once, on the copyright page, with the UN data credit required by its CC BY 3.0 IGO license.

10 · PALETTE AND COVER DIRECTION

The interior prints black on cream. The palette below is for the case and the jacketless cover only. Screen colors are approximate; cloth and foil are chosen from the printer's physical swatch books, and the foil is a metallic, not a printed ink.

Navy
cloth, option 1
#1f2a44

Old Pink
cloth, option 2 (direction
only)
#c7a2a0

Gold
foil, front and spine
approx. #b8975a

Beige
endpapers / paper tone
#efe6d4

Dark grey
screen and marketing type
#3b3b3b

Old Pink cloth with gold: a second direction, not a confirmed choice.

Developed from your reference cover. The world map is coastlines only, generalized to about 0.5 mm, and the compass rose is redrawn as clean geometry. Fine foil detail fills in on cloth, so the printer confirms minimum line and gap sizes before the artwork is final.

Foil is shown on the front only. Back-cover foil appeared in your first requirements but is not in RFQ v2; tell us if you want it quoted as an option.

Spine: an estimated 25 mm, not drawn. The spine and board artwork are set from the printer's template and blank dummy.
